August 13, 2025

Hello AdOptics Marketing team,

I am writing to express my keen interest in the Machine Learning Engineer position at AdOptics Marketing. Your company's leadership in leveraging AI to optimize ad spend, particularly the focus on bridging data science and software engineering, strongly aligns with my career aspirations and experience.

My expertise lies in building and deploying scalable machine learning systems using Python, TensorFlow/PyTorch, and various cloud platforms (AWS, GCP, Azure). I have a proven track record of taking models from prototype to production, implementing MLOps best practices for versioning, monitoring, and continuous improvement, and optimizing model performance for both speed and accuracy. My experience with data processing technologies like Apache Spark and Pandas, coupled with my familiarity with containerization (Docker, Kubernetes) and CI/CD pipelines, ensures efficient and reliable model deployment.

In a previous role, I engineered a solution that consolidated diverse enterprise systems, automating the end-to-end workflow and significantly reducing manual effort. This involved building robust system architecture, implementing strong authentication and secrets management, and establishing disciplined monitoring and alerting to maintain high availability and performance. This experience directly translates to the challenges of building and maintaining scalable infrastructure for training and deploying machine learning models, as described in the job description.

I am confident that my skills and experience make me a strong candidate for this position. I am eager to contribute to AdOptics Marketing's continued success and am excited about the opportunity to work on challenging and impactful projects. Thank you for your time and consideration.

Sincerely, Conner Jordan
