August 13, 2025

Hello Foodsmart team,

I am applying for the Senior AI Engineer role at Foodsmart. I was drawn to your mission of making nutritious food accessible and affordable for everyone, and your use of AI to personalize nutrition and care.

My core strengths align perfectly with this role. My expertise in Python and ML frameworks (PyTorch, TensorFlow, Hugging Face) combined with my experience building and deploying ML/DL models in production (2+ years) directly address your requirements. I have a proven track record of developing backend systems using Node.js and TypeScript, and I am adept at building and deploying models that power real-time personalization, such as dynamic marketing segmentation and smart outreach throttling.

In a previous role, I engineered a solution that consolidated diverse enterprise systems, automating the end-to-end workflow and reducing manual effort by over 100 hours per month. This involved robust system architecture, strong authentication and secrets management, and disciplined monitoring and alerting—all crucial for maintaining high availability and performance in your large-scale application.

I am confident in my ability to contribute significantly to Foodsmart's mission. My experience in building scalable, reliable, and secure AI-powered applications, coupled with my collaborative spirit, makes me a strong candidate for this position. I am eager to learn more about this opportunity and discuss how my skills and experience can benefit your team.

Sincerely, Conner Jordan
