August 13, 2025

Hello Perfect Harvest team,

I am applying for the Full Stack Developer role at Perfect Harvest. I was drawn to your work in designing, operating, and consulting for cannabis cultivation facilities across the country and your focus on integrating AI-driven technologies into business processes.

My core strengths are in full-stack development, with a focus on building secure, observable, and scalable software solutions using modern JavaScript frameworks and serverless architecture on Google Cloud Platform. I have extensive experience with Node.js, Firebase Functions, and various NoSQL and SQL databases, ensuring data integrity and performance. I am proficient in using TypeScript for building robust and type-safe applications.

In a previous role, I engineered a solution that consolidated diverse enterprise systems into a unified platform, automating the end-to-end workflow and significantly reducing manual effort. I have also developed custom automation and tooling to analyze system behavior, identify anomalies, and harden production environments, focusing on robust system architecture, strong authentication, and disciplined monitoring and alerting.

My experience aligns perfectly with your requirements. I am comfortable owning the entire lifecycle of a solution, from design through deployment and operations, and I am confident in my ability to contribute significantly to Perfect Harvest's continued success. I am eager to learn more about this opportunity and discuss how my skills and experience can benefit your team.

Sincerely, Conner Jordan
