Hello Telehealth Company team,

I'm applying for the Junior Node.js Developer role at Telehealth Company. I was drawn to your focus on creating innovative tools and technologies that enhance both mental and physical health for organizations and their employees.

At a previous role, I engineered a solution that consolidated diverse enterprise systems—including Rapid7, Jamf, and BigFix—into a unified platform. I automated the end-to-end workflow from data aggregation to remediation, which reduced manual effort by over 100 hours per month and improved the organization's visibility and response capabilities across thousands of endpoints.

Earlier, I developed custom automation and tooling to analyze system behavior, identify anomalies, and harden production environments. These projects leaned on the same foundations you need: robust system architecture, strong authentication and secrets management, and disciplined monitoring and alerting to maintain high availability and performance. I am proficient in Node.js, TypeScript, and GraphQL, aligning with your technology stack.

If your mandate is to build reliable, secure, and scalable telehealth solutions, I would like to help you ship that.

Sincerely, Conner Jordan
