August 13, 2025

Hello Perfect Harvest team,

I am applying for the Full Stack Developer role at Perfect Harvest. I was drawn to your work in designing, operating, and consulting for cannabis cultivation facilities across the country.

My core strengths are in full-stack development, with a focus on building secure, observable, and scalable software solutions using modern JavaScript frameworks and serverless architecture on Google Cloud Platform. I have extensive experience with Node.js, Firebase Functions, and various NoSQL and SQL databases, ensuring data integrity and performance. My experience with RESTful APIs and third-party integrations is also extensive.

In a previous role, I engineered a solution that consolidated diverse enterprise systems into a unified platform, automating the end-to-end workflow and reducing manual effort by over 100 hours per month. This involved data aggregation, analysis, and remediation, improving the organization's visibility and response capabilities across thousands of endpoints. This experience directly translates to the needs of enhancing operational efficiency and integrating AI-driven technologies into your business processes.

I am comfortable owning the entire lifecycle of a solution, from design through deployment and operations. I am confident in my ability to quickly ramp up on any specific technology stack your team uses and contribute immediately to your team's success. My experience aligns perfectly with your requirements for a highly skilled Full Stack Developer, and I am eager to learn more about this opportunity.

Sincerely, Conner Jordan
